PROFESSIONAL SUMMARY

AI-focused Software Engineer and B.Tech CSE (AI & ML) graduate with hands-on experience building and deploying Agentic AI, RAG, and LLM-powered applications from prototype to production. Skilled in Python, FastAPI, LangChain, LangGraph, vector search, ChromaDB, LLM tool calling, and AI application development. Strong problem-solving, communication, collaboration, and stakeholder-management skills, with a passion for AI engineering, intelligent automation, and building practical AI products. Driven by a builder and founder mindset, with a long-term goal of creating impactful AI-driven solutions and technology ventures.

EDUCATION

Bennett University

B.Tech, Computer Science Engineering, GPA: 8.3

2022 - 2026

Alphores Junior College, Karimnagar, Telangana, Intermediate Percentage: 96.4

2020- 2022

Paramita Heritage School, Karimnagar, Telangana Percentage : 100

2019-2020

SKILLS

Programming Languages: C++, Python, JavaScript

Frameworks & Libraries: LangChain, LangGraph, PyTorch, TensorFlow, Scikit-learn, LlamaIndex, Pandas, NumPy

Databases: SQL, MySQL, PL/SQL, PostgreSQL, pgvector, ChromaDB

Tools & Software: FastAPI, REST APIs, Streamlit, Vercel, Git, CI/CD, Pytest, Docker, AWS (EC2, S3, Lambda)

Soft Skills: Data Structures & Algorithms, OOPs, Operating Systems, DBMS

Machine Learning & AI: applied AI, data science, Machine Learning, Deep Learning, Generative AI, prompt engineering, RAG, NLP, tool-calling, Agentic AI, Model Evaluation, Responsible AI, time-series forecasting, optimization

WORK EXPERIENCE

Software Engineer Intern

Feb 2026 -

Trangile Services Pvt Ltd

- Completed hands-on training in Artificial Intelligence, Machine Learning, GenAI, RAG, and Agentic AI concepts, with an emphasis on **applied AI** delivery for real business workflows.
- Embedded with internal stakeholders to capture requirements, map workflows and constraints, and translate requests into solution designs and delivery plans for agentic assistants.
- Built and iterated agentic chatbots using LangChain and LangGraph, implementing **tool-calling**, retrieval pipelines, and domain-specific skills for reliable query handling.
- Developed data connectors and integrations (REST APIs, SQL sources, and document ingestion) to support an internal-style **internal GenAI platform** and reusable components for multiple use cases.
- Practiced **software engineering best practices** by shipping clean, modular Python services with **version control**, **testing**, and **code review** as part of the team workflow.
- Communicated capabilities, assumptions, and limitations of LLM outputs to both technical and non-technical audiences, supporting adoption and trust in AI-driven decisions.

PROJECTS

Agentic AI Chatbot

- Built an Agentic AI chatbot using LangGraph and LangChain to enable multi-step conversational workflows and intelligent task handling.
- Implemented a state-based agent architecture with tool routing, memory, and guardrails to improve reliability and contextual responses.
- Added retrieval-augmented capabilities with a vector store and embeddings, enabling domain-specific Q&A over curated documents.
- Packaged the system as a FastAPI service with structured request/response schemas, plus automated tests and lightweight evaluation scripts for regression checks.
- Documented prompt patterns, failure modes, and reusable components to share back with platform engineering and speed up future builds.

AI Engineer Persona Assistant

- Developed an AI-powered recruiter assistant using Retrieval-Augmented Generation (RAG) to answer questions about education, skills, projects, and experience.
- Integrated Google Calendar API and Vapi voice agent for interview scheduling, implementing tool use and structured function calls to complete workflows reliably.
- Built data connectors for ingesting resumes and profile data into a knowledge base, then served retrieval through LangChain + ChromaDB with Groq LLM.
- Designed and deployed conversational AI workflows with FastAPI, vector search, and voice interaction capabilities suitable for production-style rollout.
- Implemented basic safety and responsible AI checks (prompt constraints, citation-style responses, and fallback behaviors) and communicated system limitations to users.

ROOTS OF CHANGE – Modernizing Agriculture

- Developed a web-based agriculture platform providing government schemes, crop guidance, fertilizer recommendations, and land/crop marketplace features for farmers.
- Built responsive frontend interfaces using HTML, CSS, and JavaScript, focusing on usability, accessibility, and clear information architecture for non-technical users.
- Translated farmer and stakeholder needs into technical requirements, then delivered iterative releases using modular development and SDLC practices.
- Designed a data model and SQL-backed content workflow to keep schemes and recommendations current, improving operational maintainability of the platform.
